EDUCATION

Gati Shakti Vishwavidyalaya

Bachelor of Technology in Artificial Intelligence and Data Science

Vadodara, India

Exp. 2028

Specialisation: Transportation and Logistics

• Current Status: 2nd Year (4th Semester) | CGPA: 8.77

• Relevant Coursework: Machine Learning, Pattern Recognition, Design and Analysis of Algorithms, Signals and Systems, Computer Organisation and Architecture.

Delhi Public School

Class XII (Higher Secondary)

Vadodara, India

Year 2023

• Percentage: 87.0% (435/500)

• Joint Entrance Examination (JEE) Main: 96.6 Percentile (AIR: ~50,000)

Soar Valley College

Class X (Secondary / GCSE)

Leicester, United Kingdom

Year 2020

TECHNICAL SKILLS

Languages: Python, Kotlin, Java, Javascript, C, MIPS Assembly, SQL

AI & Data Science: Machine Learning, Computer Vision, NLP, Pandas, PyTorch, TensorFlow Lite, LangGraph

Tools & Frameworks: Jetpack Compose, Streamlit, PyQt6, Git/GitHub, Docker

Core Concepts: Data Structures & Algorithms, DSP (FFT), MVVM Architecture, Object-Oriented Programming

EXPERIENCE

BISAG-N

AI Engineering Intern (Agentic Supply Chain Management)

Gandhinagar, India

Jun 2026 – Jul 2026

- Engineered an agentic supply chain simulator, employing a hybrid architecture that integrated deterministic agents with a LangGraph-powered Generative AI advisory board to effectively mitigate the bullwhip effect across logistical networks.
- Authored comprehensive technical documentation and progress reports under the mentorship of Dr. Manoj Pandya (Additional Director of BISAG-N), culminating in a successful institutional project launch.

PROJECTS

PulmoSense (Audio Breathing Analysis) | Kotlin, PyTorch, TFLite, Audio Processing

Apr 2026 – Jun 2026

- Independently trained a custom PyTorch model and deployed it via TensorFlow Lite within an Android application to analyze respiratory audio patterns and deliver real-time health insights.
- Engineered a custom processing engine (PulmoEngine) to compute 128-band Mel spectrograms from raw recordings, optimizing for real-time edge inference.

Aura (Real-Time Audio Identifier) | Kotlin, Jetpack Compose, DSP

Mar 2026 – May 2026

- Engineered a fault-tolerant Android audio identifier capable of real-time acoustic fingerprinting and "Query by Humming" melody matching using Fast Fourier Transform (FFT) algorithms.
- Designed a reactive Jetpack Compose UI following MVVM architecture, integrating intelligent metadata parsing and platform-specific deep-linking for seamless song accessibility.

Waveglider & Vector Squadron (3D Flight Simulations) | WebGL, Javascript, 3D Rendering

Feb 2026 – May 2026

- Designed interactive, web-based 3D simulation games featuring user-controlled entities navigating vast, procedurally generated flight environments.
- Optimized real-time rendering, dynamic third-person camera tracking, and physics mechanics to deliver smooth, low-latency browser-based gameplay.

LocalPDF Pro (Desktop & Mobile Utility) | Python, Kotlin, PyQt6

Dec 2025 – Mar 2026

- Deployed an open-source, 100% offline desktop application and corresponding Kotlin Android utility, providing secure, native PDF processing without cloud dependency.
- Integrated an interactive analytics dashboard to track processed data volumes, prioritizing user privacy and standalone execution.

Beyond the Apex (F1 Telemetry Engine) | Python, Javascript, FastF1 API, Data Visualisation

Nov 2025 – Jan 2026

- Developed a telemetry analysis platform utilizing the FastF1 API, enabling users to generate and share interactive 2D comparative visualizations for detailed multi-driver and multi-lap performance analysis across racing sessions.

PROBLEM SOLVING & ACADEMIC ENDEAVORS

- **Competitive Programming:** Solved 160+ algorithmic problems on LeetCode requiring rigorous analytical thinking.
- **GATE 2027 Aspirant:** Actively preparing for the GATE Data Science and Artificial Intelligence (DA) paper

INTERESTS

Space Exploration, Aeronautics, Astrophysics, Telemetry Analysis, Game Development, Formula 1 and Aerodynamics.
